SMART COMMUNITIES SKILLS
DEVELOPMENT IN EUROPE

**Work with e-Services
Available to Citizens**

Dr. Paraskevi Tsoutsou, Assist. Prof.

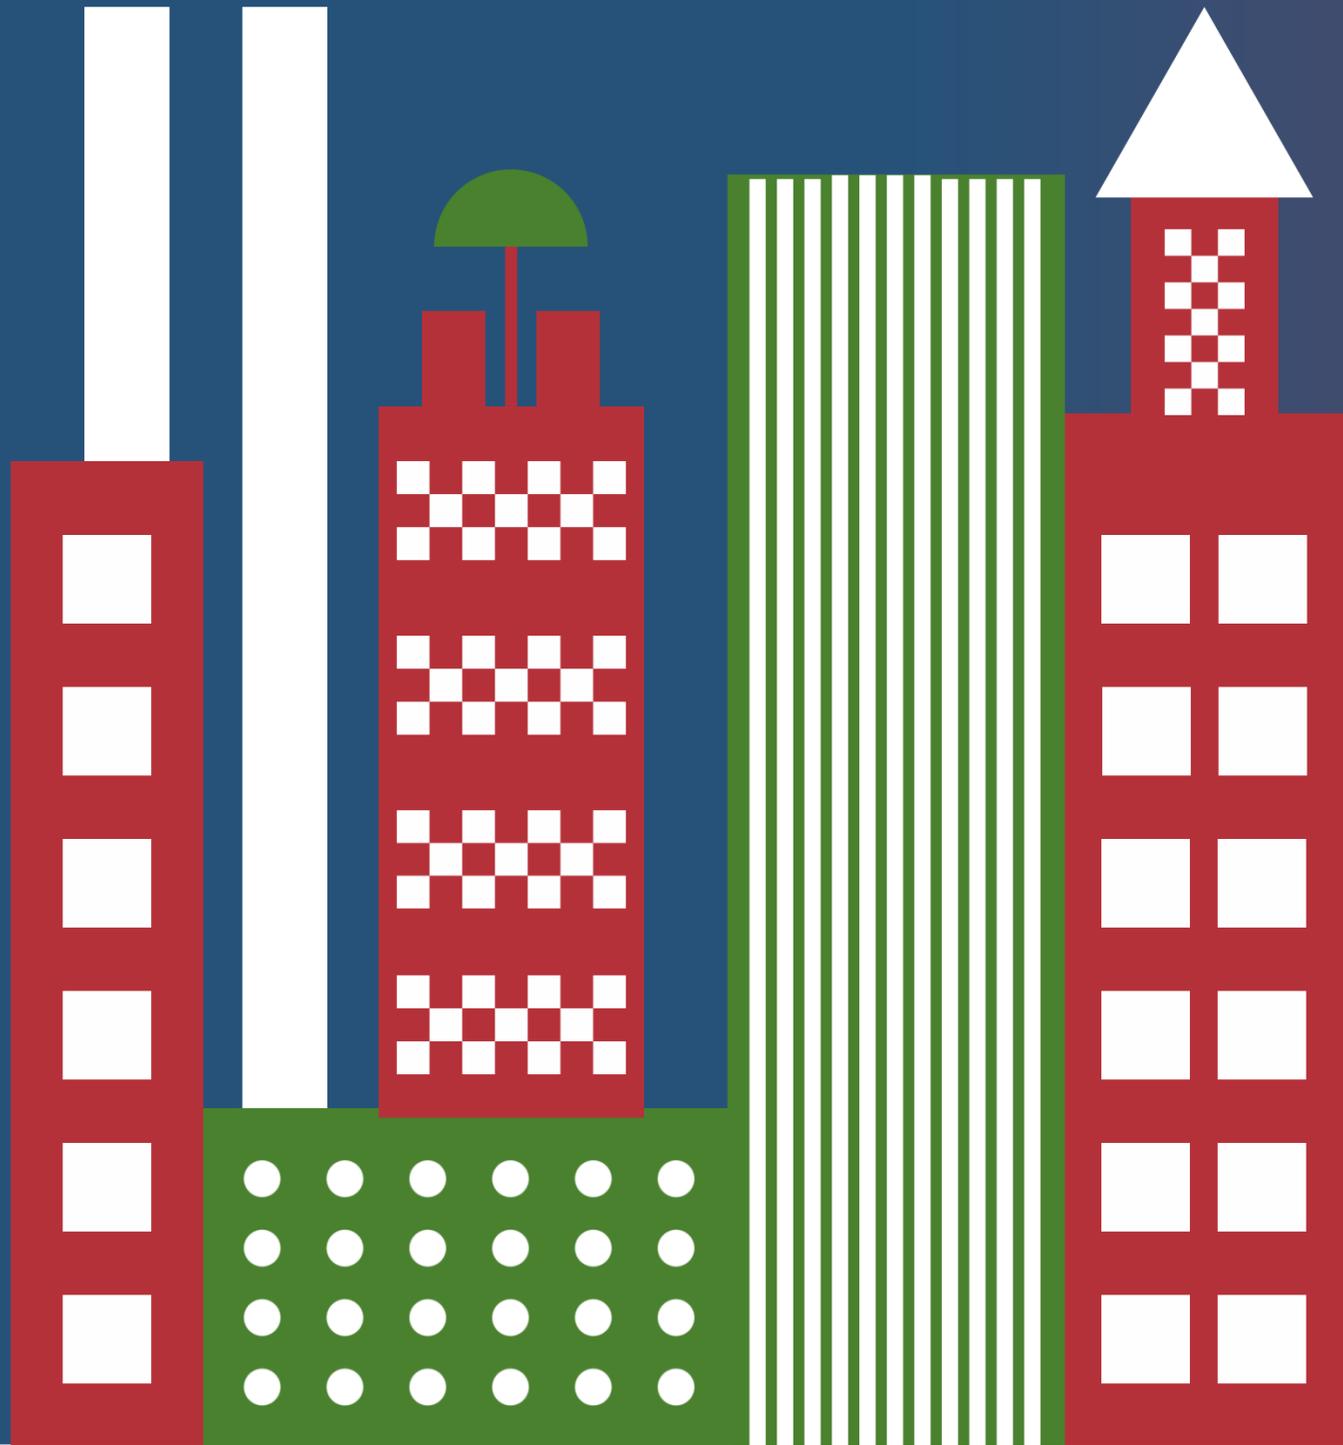

**Co-funded by
the European Union**

Project 101186291 — SMARCO

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Work with e-Services Available to Citizens

Unit 1 – Understanding
e-Services in Smart cities

Co-funded by
the European Union

Project 101186291 — SMARCO

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Module Aim & Objectives

- This module explores the ecosystem of e-services in smart cities and digital public administrations.
- It focuses on the use and management of digital platforms that improve citizen access to information and public services.
- Learners examine how e-services are designed, secured, and evaluated for efficiency, transparency, and inclusiveness, developing the skills to promote sustainable, citizen-centred digital transformation.

Co-funded by
the European Union

Project 101186291 — SMARCO

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Contents

- **Unit 1 – Understanding e-Services**
- Unit 2 – Governance and Management of e-Services
- Unit 3 – Supporting Citizens and Promoting Digital Inclusion

Co-funded by
the European Union

Project 101186291 — SMARCO

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Unit 1 Aim & Objectives

- This unit introduces the concept and purpose of e-services in smart cities and digital public administrations.
- Learners explore the technologies, types, and stakeholders that enable citizen access to digital public services.
- It also examines data protection, cybersecurity, and trust as key factors for effective and secure e-service delivery.

Co-funded by
the European Union

Project 101186291 — SMARCO

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Unit 1 Learning Outcomes

By the end of this unit, learners will be able to:

- **Define** the concept and purpose of e-services within smart cities and digital public administrations, explaining their role in improving citizen access to public information and services.
- **Describe** the key digital technologies and infrastructures – such as IoT, cloud computing, and data analytics – that enable the development and delivery of smart city e-services.
- **Identify and classify** the main categories of smart city e-services and their stakeholders, illustrating how different actors (public authorities, private providers, citizens) interact in the service ecosystem.
- **Analyze** the principles of data protection, cybersecurity, and citizen trust that ensure the secure and reliable operation of e-services.

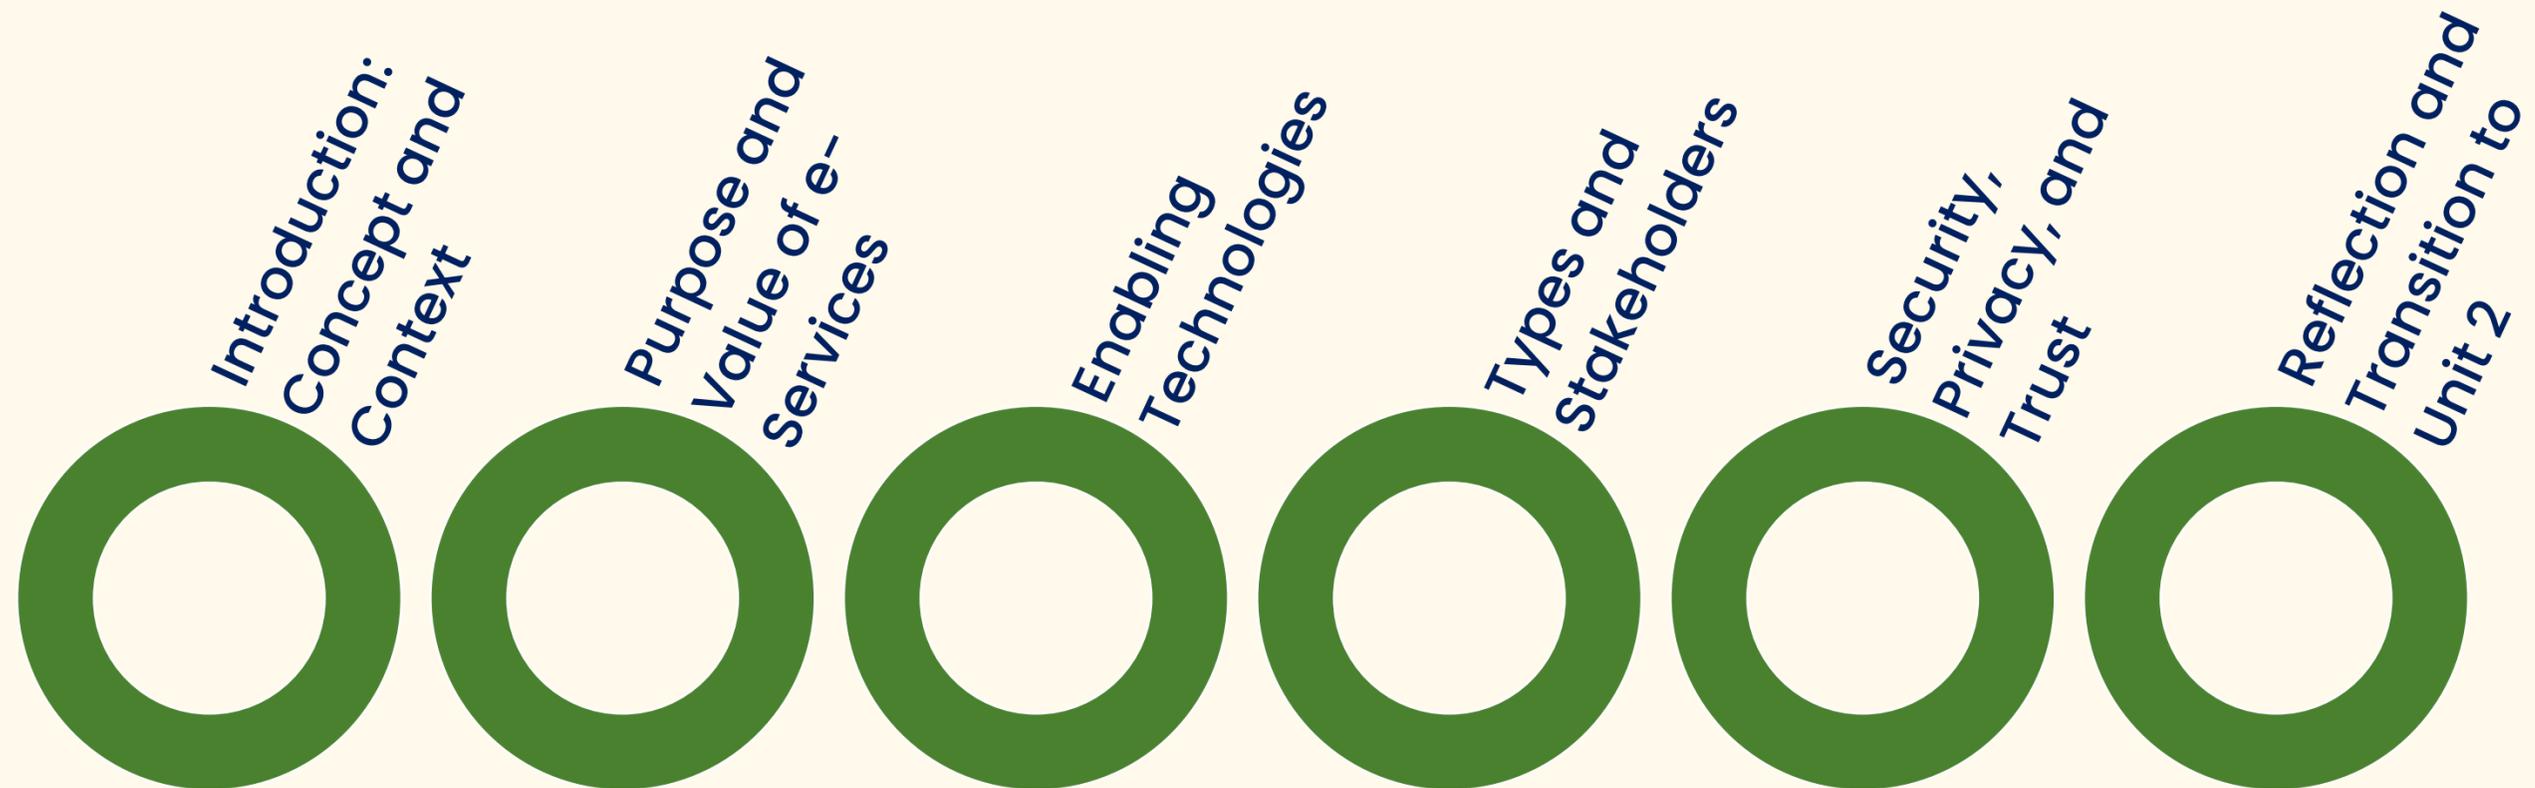

Co-funded by
the European Union

Project 101186291 — SMARCO

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Unit 1 Roadmap

Co-funded by
the European Union

Project 101186291 — SMARCO

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Introduction to Smart City e-Services

- Although definitions of 'Smart City' and 'Smart City services' differ across the literature, there is a consensus that information technology constitutes a fundamental component of both constructs.
- Advancements in these technologies facilitate the development of service-oriented applications that are increasingly customized to meet the needs of urban populations.
- The unifying element among these within the Smart City framework is their intrinsic connection to urban service delivery.
- *Smart city e-services are digitally enabled public services designed to deliver public value through sustainable, citizen-oriented, and data-driven service models.*

Co-funded by
the European Union

Project 101186291 — SMARCO

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Why e-Services Matter for Citizens

- E-services are usually accessible regardless of time or place that is provided by city manager to improve citizens' quality of life.
- Beyond efficiency, public e-services aim to improve quality of life, transparency, accessibility, and long-term sustainability.
- There is a diversity of e-services and innovation due to the rapid development of smart city across globe
- Each city in different countries has focus on different services.

Co-funded by
the European Union

Project 101186291 — SMARCO

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

How Cities Deliver e-Services

- Smart city services offer efficient solutions to address challenges related to urban mobility, public service delivery, and safety, while concurrently advancing sustainability objectives.
- Smart city e-services are delivered through different organizational and business models, depending on governance structures, partnerships, and service goals.
- Municipalities leverage smart city platforms to expedite and simplify the deployment of sophisticated tools that deliver resilient services targeting prevalent urban concerns.
- These applications frequently utilize a unified mission-critical network and IoT infrastructure to enhance security, operational efficiency, and scalability.

Service Categories & Stakeholders

Category	Examples of e-Services	Main Stakeholders
Governance & Administration	e-Voting, e-Participation platforms, Open data portals, e-Permits	Local & regional authorities, citizens, civil society
Mobility & Transport	Smart parking, traffic monitoring, public transport apps	Citizens, transport agencies, mobility providers
Environment & Sustainability	Smart waste collection, air quality monitoring, energy management	Municipal services, citizens, environmental agencies
Public Safety & Health	Smart surveillance, emergency response, e-Health systems	Police, health authorities, hospitals, citizens
Economy & Business Services	e-Procurement, digital taxation, local business portals	SMEs, entrepreneurs, government departments
Education & Social Inclusion	e-Learning, citizen support portals, cultural heritage apps	Educational institutions, NGOs, community centers

Smart Public Services as Sustainable Service Models

- Smart city services are delivered through structured service models
- These models define:
 - value for citizens
 - stakeholders involved
 - required resources
 - expected impacts
- Sustainability (economic, social, environmental) is a core design principle

GDPR and Data Protection in e-Services

- Smart City services represent critical subjects within the scope of the General Data Protection Regulation (GDPR), which has been enforceable across the European Union (EU) since May 25, 2018.
- The enforcement of this regulation has significantly heightened the regulatory obligations concerning data protection for Smart City applications.
- Notably, the obligatory Data Protection Impact Assessment (DPIA) process introduces a substantial challenge for data processing operations that present “high risks to the rights and freedoms of individuals” as defined by Regulation (EU) 2016/679 (GDPR, 2016).

Securing e-Services: Three Lines of Defense

01

Identify the **functions** and **information** that should be protected regarding provided services

02

Remove **vulnerabilities** related to service content at the planning, design, and development phases

03

Check or monitor **illegal commands and requests** to applications

Co-funded by
the European Union

Project 101186291 — SMARCO

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Step 1: Identify Critical Functions & Sensitive Data

01

- Identify the **essential functions** (such as communication, display, and control) and sensitive information (including personal data and design specifications) encompassed within the "Service" category.
- Furthermore, beyond the risks of data leakage and falsification, consider the potential security threats where Smart City services may be exploited as platforms for launching attacks on other systems, or where the services themselves may be subject to unauthorized manipulation or control.

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Step 2: Design Out Vulnerabilities

02

- Verification and evaluation of **safe and secure design**
- Introduction of authentication function
- Initial settings
- Encryption

Co-funded by
the European Union

Project 101186291 — SMARCO

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Step 3: Detect & Monitor Unauthorized Commands

03

- It is imperative to identify anomalous conditions promptly when **irregular operations** arise due to system defects or malicious attacks, to mitigate the propagation of adverse effects.
- For instance, in services processing user inputs, it is essential to verify whether these inputs contain unauthorized commands that may induce unintended behaviors within the system.

Success Factors for Smart City e-Services

- **Several factors might impact the success of smart services that a city need**
 - **Lack of interest in data integration by some stakeholders and their resistance to share data**
 - **involving citizens both in policy decisions related to the smart city and in the development of smart city services**

**Co-funded by
